## Welcome to the Certificate Import Wizard

This wizard helps you copy certificates, certificate trust lists, and certificate revocation lists from your disk to a certificate store.

A certificate, which is issued by a certification authority, is a confirmation of your identity and contains information used to protect data or to establish secure network connections. A certificate store is the system area where certificates are kept.

## Your data won't be private

CA certificates are used by websites, apps, and VPNs for encryption. Only install CA certificates from organizations you trust.

If you install a CA certificate, the certificate owner could access your data, such as passwords or credit card details, from websites you visit or apps you use – even if your data is encrypted.

با انتخاب این گزینه هشدار امنیتی را بپذیرید

Install anyway

Don't install
